

Calibration Instructions

Calibrating During Start-Up

- Please remove any objects from the wooden load tray before turning on the scale.
- If there is a leftover value on the scale, or the user put something on the scale before it was turned on, press the tare button to zero out the scale.

Calibrating During Use

- If scale is reading a random value or you find that the scale is not providing an accurate measurement, please remove your item and press the tare button to remove any unwanted weight.
- If the problem persists, unplug, and re-plug the scale.
- If the problem did not go away, please contact the maker of the scale.

Calibrating After Use

- If you do not add any items before you turn it on, there is no need for calibration after using the product.

Most Importantly

Enjoy your new scale :D
